Key Topics and Solution Techniques in the 11th Edition

Time Value of Money Calculations

The foundation of engineering economic analysis lies in understanding how money's value changes over time.

Present Worth and Future Worth

- Present Worth (PW): Converts future cash flows to their equivalent value today using a discount rate.

- Future Worth (FW): Calculates the value of cash flows at a specific future date.

Solution Approach:

- Use formulas:
- $PW = F / (1 + i)^n$
- $FW = P (1 + i)^n$
- Apply appropriate discount or interest rate.
- Summation of multiple cash flows.

Equivalent Annual Cost (EAC)

EAC helps compare projects with different lifespans by converting their costs into an equal annual amount.

Solution Approach:

- Calculate the present worth of costs.
- Convert PW to an annual amount using the capital recovery factor.

Internal Rate of Return (IRR) and Benefit-Cost Ratio

- IRR: The discount rate that makes the net present value (NPV) zero.
- Benefit-Cost Ratio: The ratio of the present value of benefits to costs.

Solution Approach:

- Use iterative methods or financial calculators to find IRR.
- Calculate PVs for benefits and costs, then compute ratio.

Depreciation and Taxation

Accounting for depreciation and taxes affects project cash flows and profitability analysis.

Solution Approach:

- Apply appropriate depreciation methods (straight-line or declining balance).
- Adjust cash flows for tax effects.

Practical Examples from the 11th Edition

Example 1: Evaluating a Replacement Project

Problem Statement:

Determine whether to replace an existing machine with a new one based on costs and benefits over a 5-year period.

Solution Highlights:

- Calculate the present worth of costs for both options.
- Find the EAC for each alternative.
- Select the option with the lowest EAC.

Example 2: Analyzing an Investment Using IRR

Problem Statement:

Calculate the IRR of an investment with known cash inflows and outflows.

Solution Highlights:

- Set NPV equation to zero.
- Use trial-and-error or financial calculator to find IRR.
- Interpret the IRR in relation to the company's required rate of return.

Example 3: Comparing Projects with Different Lifespans

Problem Statement:

Compare two projects with different durations to determine the more economical choice.

Solution Highlights:

- Calculate the PW of each project.
- Convert to an equivalent annual cost.
- Make decisions based on the lowest EAC.

Resources and Additional Tools

The solutions in Engineering Economic Analysis 11th Edition are complemented by various resources:

- Financial Calculators and Software: Tools like Excel or specialized financial software simplify calculations.
