Mendel's experiments with pea plants established the principles of inheritance, including the laws of segregation and independent assortment, which form the foundation of genetics. Describe the structure and function of DNA as explained in NCERT biology. DNA is a double helix polymer made of nucleotide units containing a sugar, phosphate group, and nitrogenous base. It stores genetic information and controls cellular activities by coding for proteins. What are the main differences between mitosis and meiosis? Mitosis results in two genetically identical diploid daughter cells and is involved in growth and repair, while meiosis produces four genetically diverse haploid gametes for sexual reproduction. How do enzymes influence the rate of biological reactions? Enzymes increase the rate of reactions by lowering activation energy, providing an alternative pathway, and thus enabling reactions to proceed faster under mild biological conditions.
